

# Heptagon

Decentralized Music Streaming

Our mission is to empower  
artists to **take control** of their  
own music.

**Heptagon** strives to enable  
creators to easily and securely  
**publish and sell** their music  
directly to their fans.

# JOURNEY

# Our Beginnings

We started our journey as a part of the ETH Mexico Hackathon.

There, we won a prize from the Lens Protocol organization.

**Technology is nothing.**

What's important is  
that you have a **faith in  
people**, that they're  
basically good and  
smart, and if you **give  
them tools**, they'll do  
wonderful things with  
them.

**Steve Jobs**

## #1

Get talent to publish and use features in early stages and share with their audience.

## #2

Use social media and attend to Web3 NFT events to talk about the features and advantages of Heptagon.

## #3

Make a marketing plan designed to reach a wider range of audiences not necessarily involved in the cryptospace.

## Design Points

- Provide users with familiar interfaces.
- Do not change elements that have been proven to work.
- Implement features organically, don't concern the user with the behind-the-scenes work.
- Stay as simple as possible.

# WHAT'S NEXT

- Look into implementing new technologies like **Lit Protocol** and **Superfluid**.
- Look into **Filecoin Deals** and methods to make **IPFS** storage more robust.
- Promote the platform to small communities in the short term. Starting in **Mexico**.
- Talk with specific artists to publish in the **platform**.
